Digests what you eat. What is worth doing at all is worth doing well. If you are going to use something to help digest your food, use a preparation that will digest completely everything you eat. A great many people take pepsin in some form, after eating; but pepsin simply aids the digestion of eggs, meats and other albuminous foods and doesn't help

the digestion of fats and starchy foods. We usually eat more than meat, cheese and eggs; in fact we have to eat freely of grains, potatoes and other starchy foods if we supply the variety of nourishment necessary to maintain the various tissues of the body. But these are the things most people who suffer from dyspepsia can't digest. And so we would suggest that when you take anything to help digestion, take what will digest every kind of food. There is only one preparation known that does this, and that is Kodol Dyspepsia Cure. It contains all the digestants and completely digests what you eat. No other preparation does this.

It can't help but do you good. The \$1 bottle contains 2% times the 50c. size
